

You prepare them for the future.  
We protect them for today.

**POM** AT SCHOOL

PEACE OF MIND TECHNOLOGIES, LLC

## Our Mission

POM Technologies creates environments where people can go about their daily lives efficiently, effortlessly and – most important of all – securely.

POM has a proven reputation for designing and implementing advanced security systems for some of the most demanding clients in the greater New York Metropolitan area. Grand Central Station, Jones Apparel Group, Fresh Direct and Chelsea Market are just a few of the prominent enterprises who trust their security to us.

*“POM designed one of the most advanced security systems in the city for our school.”* — Chief Financial Officer, Abraham Joshua Heschel School

Our client roster also includes many of the area’s most prestigious preparatory academies. Just as parents turn to these institutions to provide the finest education for their children, these top tier schools count on us to provide the best technologies for keeping their students, teachers and campuses secure.

*“Our parents just expect Collegiate to provide the best. We can’t afford to do less.”*

— Mark Gordon, Director of Facilities, Collegiate School

## POM Security Solutions - The Top of Their Class

### Surveillance

POM's advanced surveillance systems provide state-of-the-art security day and night, indoors and out. Cameras are fully integrated into the overall security design and can be accessed anywhere at any time, via mobile phones, tablets and other internet devices. Our security cameras provide superior optical quality and a range of options designed to fit any location or environment.

### Access Control

Whether you have a single entrance or multiple doorways at multiple campus locations, POM Technologies offers easy-to-manage, flexible solutions for controlling and logging each and every entry/exit attempt. Our door access systems use the latest technologies from magnetic cards to biometrics.

### Alarms

POM provides both intrusion and health safety alarm systems. All alarm systems are connected to remote monitoring stations and are fully integrated into our access and surveillance systems. This gives added benefits of automatically unlocking exit doors during fire alarms and permitting remote monitoring to identify false alarms.

### Managed Services

We offer a variety of interactive and "Virtual Video" services which can be customized to meet your school's needs. These include such items as video alarm verification and remote monitoring and access via mobile and internet connected devices – all of which can minimize costs (less onsite manpower) while maximizing security.

## POM Technologies - Your Security Partner

### Assessment and Design

Our security design specialists will work with you to assess the physical and operational needs of your school. Then, we'll outline a comprehensive security systems plan – complete with benefits and costs that are tailored specifically to your infrastructure and requirements, including layout, wiring, product selection and strategic placement.

### Implementation and Training

Manufacturer certified technicians and project managers implement all installations on any size job – from high rises to multi-building campuses. The work doesn't stop until you're satisfied and everything is working smoothly. Once your system is tested and operational, your selected school facility or security personnel will be trained by POM's technical services group on use and integration of your system. But it doesn't end there.

### POMAdvantage Service and Support

Dedicated service technicians and Quality Control Program representatives make sure your system continues to operate smoothly and your campus is secure. We guarantee priority support, fast turnaround and first-rate customer service no matter how small the issue. Our affordable, comprehensive POMAdvantage service and support plan covers all parts, loaner equipment, labor and preventative maintenance, so you can protect yourself from unexpected costs by minimizing system downtime from potential malfunctions.

## Time & Attendance: An Innovation for Collegiate School

While traditional Time & Attendance products are designed for business applications, POM recognized its potential for school application. POM designed and implemented a customized system that enables Collegiate to manage student attendance and tardiness, track and control access to school events and – perhaps most importantly – provides a potentially life-saving means of accounting for students in a fire or other emergency.

*“We can know in 5 seconds, by grade, who’s in or out of the building.”*

— Mark Gordon, Director of Facilities, Collegiate School

## Technical Integration: Conquering Space and Time At Marymount School

*The Challenge:* Secure three campus buildings spanning 15 city blocks – two buildings with non-coordinated access systems and a third with no existing access system. Integrate and update the surveillance technology at all sites. Reorganize old data and make current ID cards compatible with the new access system.

*The Solution:* POM created a unified security system (access, surveillance and alarm) that connects all three campus buildings and is tailored to each building’s unique aspects and uses. The old database was painstakingly cleaned, updated and transitioned to the new access system without a break in service. Students and faculty never had to stop using their old access cards as the new system was implemented and customized reports were created that allow tracking of attendance and access activity at each building and across all three campuses.

*“The installation involved three buildings – with old and new technology. They did it with no down time at all.”*

— Anthony Wartel, Director of Facilities, Marymount School

## Managed Services: 24/7 Remote Security at Spence School

Construction projects can be security headaches, and Spence School was facing a significant one. They had two separate buildings and had purchased a third – a brownstone. The plan was to attach it to the main building, sections of which were also scheduled to be upgraded.

Rather than hire costly 24-hour guards, Spence asked POM to provide a comprehensive “virtual guard” service. POM installed cameras as well motion detectors and speakers throughout the construction site. Should a motion detector alarm be tripped, a video verification procedure allows remote monitoring agents to quickly respond – by using the speaker call down, contacting the police – or both.

*“During our 3-year renovation project the perimeter and construction site were secure at a major cost saving thanks to POM’s remote monitoring.”* — Facilities Manager, The Spence School
